

Vision Statement

- No plan can reduce all risks.
- Collection and analysis of scientific data will improve understanding of the FIMP system.
- Site-specific measures will reduce mainland and barrier island flooding.

- Measures that reduce risks and protect human life and property will be given priority.
- Measures that protect and enhance natural processes will be given preference.
- Measures that minimize adverse environmental impacts and demands for public resources will be used.

- Dune and beach replenishment will be optimized to balance storm damage reduction and environmental considerations.
- Existing coastal modifications will be assessed and possibly altered or removed to restore important physical and biological processes.
