RE: Dredged Material Sampling Plan
Origin: Arthur Kill Contract Area 2/3
Disposal: Upland Beneficial Use in New Jersey and/or New York

Dear Mr. Greges:

This letter is forwarded in reply to your June 9, 2003 request for a sediment sampling and testing plan for Arthur Kill Contract Area 2/3 deepening project.

Contract Area 2/3 involves dredging approximately 690,000 cubic yards of dredged material to a depth of -41 feet below MLW plus 2 feet for safety clearance, plus 1½ feet allowable overdepth (project depth -44 ½ feet). This sampling and testing plan only addresses the dredged material that is expected to be placed upland in New York or New Jersey. The suitability of the underlying material for use as remediation material at the HARS is a determination made by the U.S. Environmental Protection Agency and the U.S. Army Corps of Engineers. Therefore, sampling and testing of the underlying material must be coordinated with those agencies.

Sampling

The attached sampling plan identifies 66 sampling locations for the dredged material from the Contract that is anticipated to be placed upland. Based on the geographic reach of the project and the depth of the sediments to be dredged, the number and distribution of samples, as reflected on the attached sheets, will adequately characterize the sediments to be dredged for upland placement in both New Jersey and New York.

It is our understanding that the authorized project construction depth for this project is -44 ½ feet, and that the depth of Holocene sediments varies within the project area. As a result, this sampling plan has been developed with the assumption that each core sample shall be taken to the depth of the Holocene sediments within the project area versus to project depth as is routinely required in most sampling plans. Therefore, it is critical that each sample core reach the depth of the Holocene sediments that is anticipated to be placed upland. Each core shall be described and inspected for obvious stratification. Each core shall be analyzed for grain size, Total Organic Carbon and percent moisture. The Office of Dredging and Sediment Technology shall be notified of any cores that exhibit grain size stratification at different elevations or of different apparent grain size prior to homogenizing (609) 292-1250), other than as anticipated by this plan. If such stratification exists, it may be necessary for the Departments to modify the compositing scheme outlined below.

Field logs shall be kept of each core. It should be noted that any additional information concerning the physical character of the material gathered during sampling, such as the existence of large rocks, may be useful in future bid solicitation documents. These logs must be submitted to the Departments together with the analytical data. If stratified layers are evident, the stratified layers shall be separated and each separate layer shall be homogenized. After homogenization as outlined above, each sample core or individual strata shall be tested for grain size, percent moisture and total organic carbon.

Analytical Testing

Analytical testing may be performed on composites of the core samples only if the grain size among the identified sample cores is uniform. If stratification appears uniform and occurs at roughly the same elevation throughout the cores, the stratified layers may be composited in accordance with the compositing scheme outlined below without further guidance from these Offices. Composites must be made up of equal amounts of the homogenized core sample strata as follows:

Composite A =sample cores 1, 2 and 3
Composite B =sample cores 4, 5 and 6
Composite C =sample cores 7, 8 and 9
Composite D =sample cores 10, 11 and 12
Composite E =sample cores 13, 14 and 15
Composite F =sample cores 16, 17 and 18
Composite G =sample cores 19, 20 and 21
Composite H =sample cores 22, 23 and 24
Composite I =sample cores 25, 26 and 27
Composite J =sample cores 28, 29 and 30
Composite K=sample cores 31, 32 and 33
Composite L=sample cores 34, 35 and 36
Composite M=sample cores 37, 38 and 39
Composite N=sample cores 40, 41 and 42
Composite O=sample cores 43, 44 and 45
Composite P=sample cores 46, 47 and 48
Composite Q=sample cores 49, 50 and 51
Composite R=sample cores 52, 53 and 54
Composite S=sample cores 55, 56 and 57
Composite T=sample cores 58, 59 and 60
Composite U=sample cores 61, 62 and 63
Composite V=sample cores 64, 65 and 66

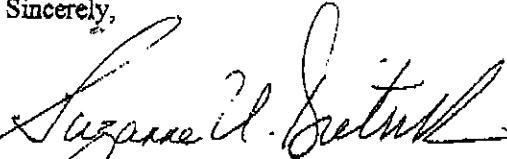

Each composite shall be analyzed for grain size, percent moisture and total organic carbon. In addition, each composite shall be tested for bulk sediment chemistry. The specific analytes which must be tested for include VOCs, semi-volatile organics, PCBs and dioxins, pesticides, metals, and Dioxin and Furans and their congeners. The specific analytes required by both NY and NJ are found in appendix B Attachment 1 of the technical manual titled "*The Management and Regulation of Dredging Activities and Dredged Material in New Jersey's Tidal Waters* (NJ DEP, October 1997).

Inasmuch as the NYS DEC July 22, 2003 letter states that NYS DEC will use totals analysis data (bulk sediment chemistry) in characterizing the dredged sediments when proposed for beneficial reuse such as grading fill beneath a cap at brownfield, landfill or remediation site, NJDEP and NYS DEC have attached a single protocol for the additional testing required for upland placement in New Jersey and New York. The analytical package submitted must include a description of the recipe (i.e. types of additives and proportion) used in the preparation of the analytical composites. Please note that the attached table 'Maximum Concentration of Contaminants for the Toxicity Characteristic' is used to determine the nature of the material (hazardous or nonhazardous) for the purposes of upland placement in New York. If any sample's total analysis data establish that analyte concentrations could exceed the levels contained in the table, NYS DEC reserves the right to require subsequent TCLP analysis on that sample.

Please note laboratories used to perform the testing required herein must be certified by the State of New Jersey and the State of New York for the particular analytical method to be performed. Also, both states recommend verifying the volumes required for the needed tests with the laboratories prior to sampling. Any data package submitted to either NJ DEP or NYS DEC shall comply with the QA/QC requirements outlined in Appendix B of the Dredging Manual. It is requested that data package be provided on a compact disk. In addition, it is requested that a data summary table of the results in an Excel spreadsheet be provided with the data package.

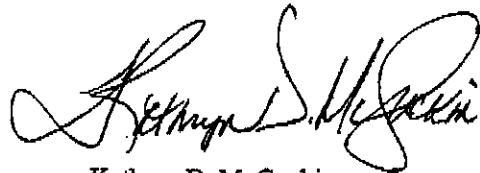

If you have any questions regarding the sediment sampling plan, please feel free to contact me at (609) 292-8838 or Kathryn D. McGuckin of the NYS DEC at (718) 482-4078.

Sincerely,

Suzanne U. Dietrick

II. Introduction

The objective of this project was to collect and analyze sediment, from the Arthur Kill, Contract Area 2/3 for Upland Beneficial Use in New Jersey and/or New York. This work was conducted in accordance with appendix B, Attachment 1 of the technical manual entitled "The Management and Regulation of Dredging Activities and Dredged Material in New Jersey's Tidal Waters" (Dredging Manual), October 1997. Along with a letter dated July 25, 2003 from the NJ Office of Dredging and Sediment Technology and NYS Department of Environmental Permits.

ASI performed all sampling and physical analyses (grain size distribution, percent moisture & TOC).

IV. Material and Methods

All sampling and testing were performed in accordance with appendix B, Attachment 1 of the technical manual entitled "The Management and Regulation of Dredging Activities and Dredged Material in New Jersey's Tidal Waters (NJ DEP, October 1997)." Along with and a letter dated July 25, 2003.

A. Sampling

Test sediment from sixty-six locations and four field-blanks, were collected from the Arthur Kill, Contract Area 2/3A, New Jersey, by Aqua Survey personnel on August 14 through September 10, 2003. Site maps are shown on pages 8- (Figures 1 and 2).

Insufficient sediment for analysis was obtained from locations 52 through 54, (composite R) and 61 through 63 (composite U) and therefore were not included in any of the analysis.

The vessel used for sampling was positioned using a Trimble NT200D Differential Global Positioning System (DGPS) and collected using a Rossfelder P-3 vibracore with flexible plastic core liners. The project depth was -44.5 feet and the depth of the Holocene sediment varied within the project area. All samples were then taken at the depth of the Holocene sediment rather than project depth as is usually required. Every core sample taken was inspected and its characteristics were recorded on a Sediment Core Log Sheet.

All core samples were assigned unique ASI sample numbers. Samples were received in good condition at ASI in Flemington, NJ on the same day as collected and stored in the dark at 2-4° C.

Sampling core coordinates are listed in Table 1. All supporting documentation, including chains-of-custody, sediment core logs, photographs and sample use forms can be found in the Appendix.

B. Homogenizing and Compositing

Each of the sixty core samples (core location 52 –54 and 61-63 were omitted) were carefully homogenized using a stainless steel mixer. This procedure followed the specific guidelines found in pages 9-11 and Appendix A of the Dredging Manual and according to SOP/GEN/401. Samples were mixed until uniform in color and texture. Twenty composites were created from the sixty core locations, see Table 2.

Since it is proposed that some of the dredged material will be treated with stabilizing materials which will alter its chemical and physical composition, an aliquot of each composite sample was treated in a manner to simulate this stabilization process. A standard commercial brand of Portland cement was used in creating the amended composite samples. An aliquot of each composite sample, A-V, (R and U were omitted) was blended with Portland cement (8% by weight) for two minutes using the power drill and mixing paddle.

Sub samples of each of the composites both amended, and unamended samples, and the individual cores were reserved for the appropriate chemical and physical analyses.

The composite samples were logged in and assigned unique sample numbers.

C. Grain Size Distribution, Percent Moisture and TOC

Sub-samples of each homogenized core, and the composites (unamended) were analyzed by ASI for grain size distribution and percent moisture in accordance with the Standard Guide for Selection of Methods of Grain size Analysis of Fluvial Sediments (Manual Methods)¹. Designation: D4822 (Re-approved 1994).

Total Organic Carbon (TOC) was also determined at ASI based on the guidance from EPA Office of Solids Waste and Emergency Response SW-846 Method No. 9060 (Volume IC, Chapter 5, Revision 0, 9/86). The instrument for this analysis is the Dohrmann TOC Boat Sampler, Model 183 (Serial number 98202003) connected to the Dohrmann DC-80 TOC Analyzer.

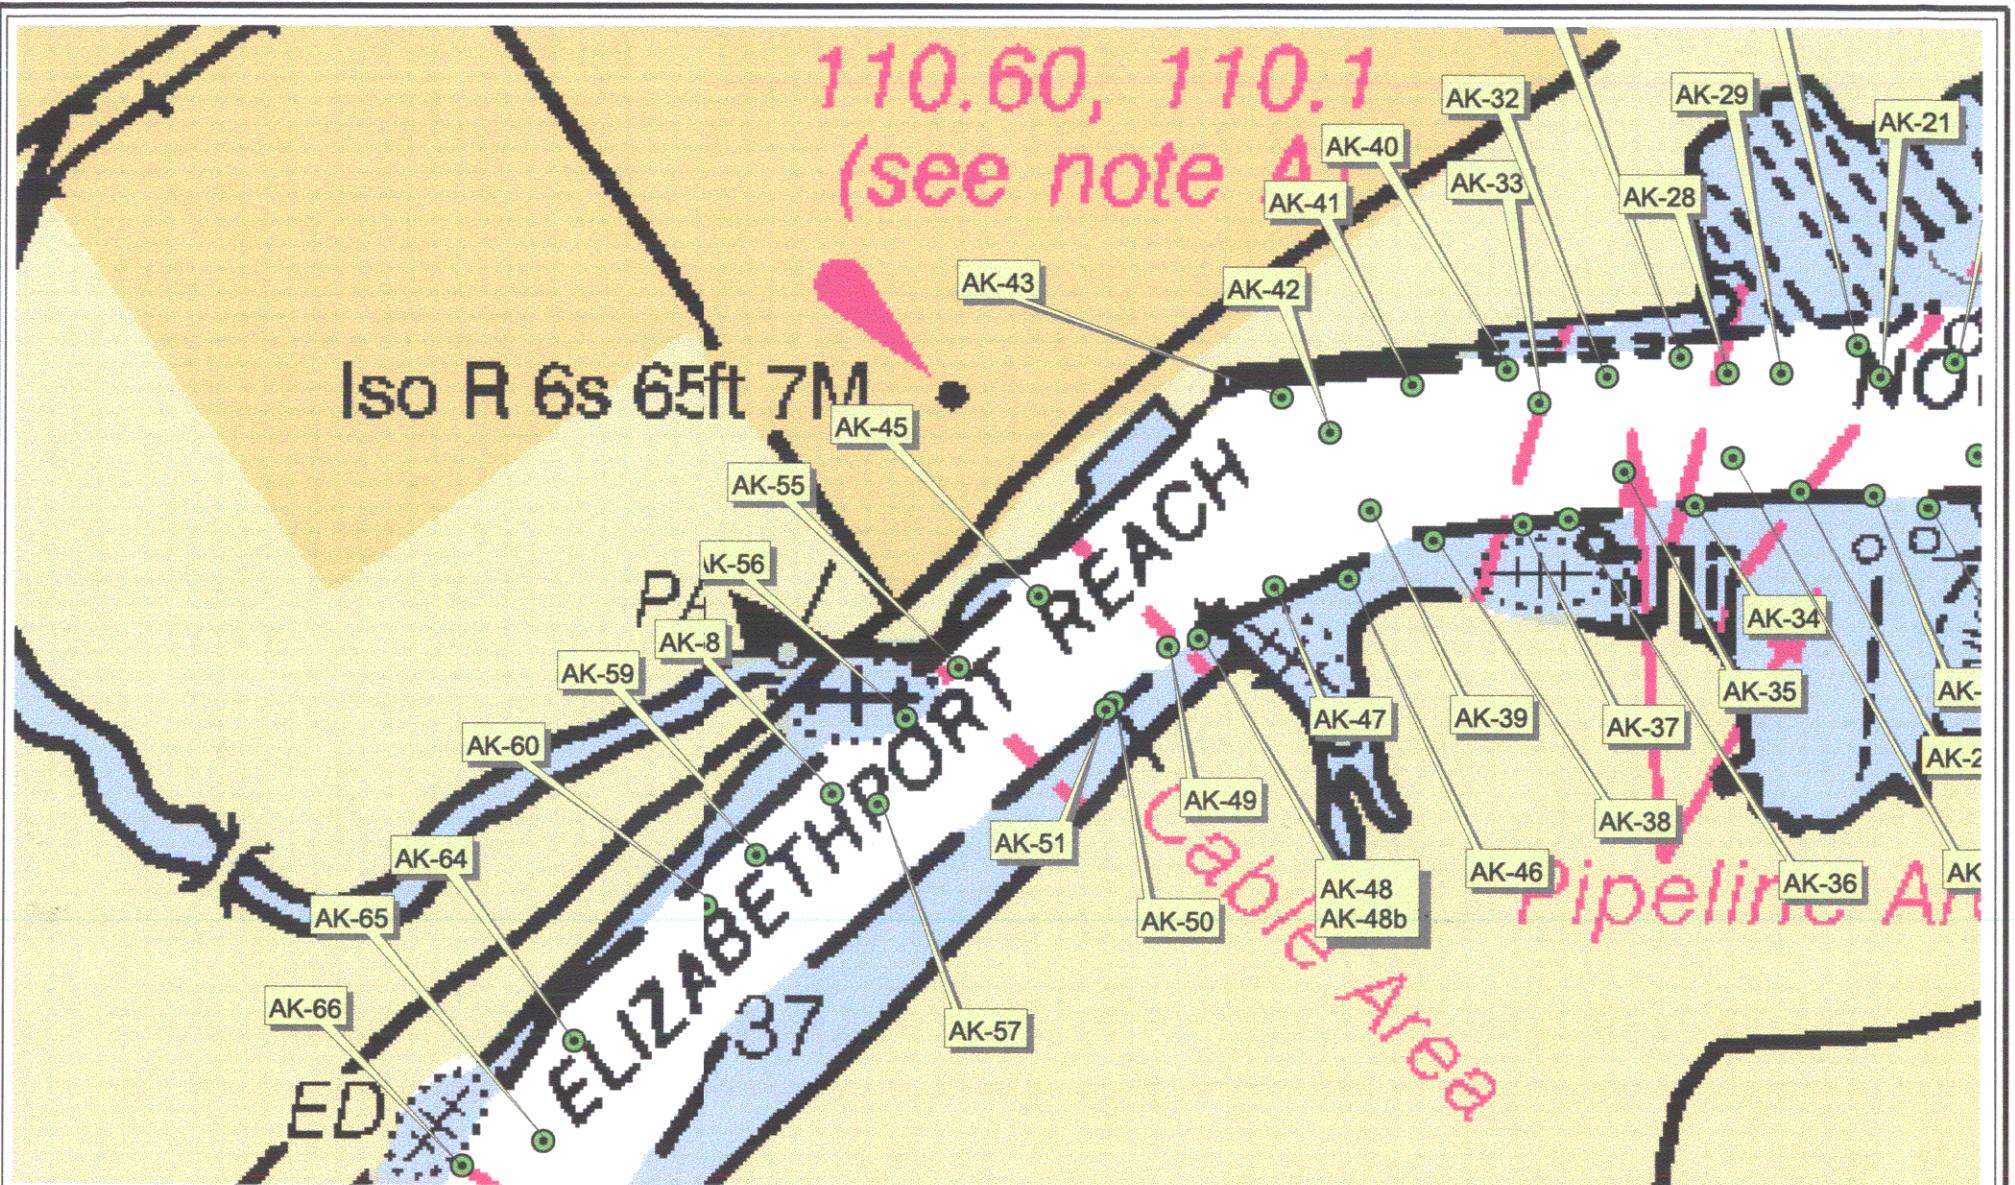

D. Chemical Analyses

The amended and unamended composites were prepared at Aqua Survey and a sub sample of each and the field-blanks were delivered to Battelle Duxbury Operations by overnight courier. The samples were shipped in glass jars in coolers with blue/wet ice packs, following chain-of-custody procedures. Battelle was responsible for the chemical analyses, except for the multiple extraction procedure, which was performed by Seven Trent Laboratories, who also

performed the chemical analyses. Each of the composite samples was analyzed for all of the parameters listed in Appendix B of the NJDEP guidance manual.

V. Physical Analysis Results

The grain size distribution, percent moisture content and TOC for each core and the composite samples are shown in Tables 3 and 4.

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

* = NJDEP Required detection limit

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Detection limit below the reporting limit or is an estimated value

E = Estimated value

Dieldrin	0.94	ND
Endosulfan I	0.34	ND
Endosulfan II	0.85	ND
Endosulfan sulfate	0.8	ND
Heptachlor	0.72	ND
Heptachlor epoxide	1.93	ND
trans Nonachlor	0.49	ND
C12(08)	0.58	ND
C13(18)	0.99	ND
C13(28)	0.74	ND
C14(44)	0.57	ND
C14(48)	0.47	ND
C14(52)	0.6	ND
C14(66)	0.5	ND
C15(87)	0.86	ND
C15101)	0.48	ND
C15((105)	0.91	ND
C15(118)	0.84	ND
C16(128)	0.78	ND
C16(138)	0.8	ND
C16(153)	0.8	ND
C17(170)	0.69	ND
C17(180)	0.53	ND
C17(183)	0.79	ND
C17(184)	0.89	ND
C17(187)	0.69	ND
C18(195)	0.57	ND
C19(206)	0.46	ND
C110(209)	0.52	ND

** Battelle analyzed this sample for PCB/pest and PAHs only

= value from 2nd column confirmation

ND = Not detected

B = Indicates analyte detected in method blank as well as associated field sample

J = Analyte detected above the achieved MDL, but below the target MDL

E = Estimated value

DATA QUALIFIERS FOR ORGANIC ANALYSES

Data Qualifiers used on Form 1s or Certificates of Analysis (COA) follow the specifications set forth in the technical specifications of the most current CLP Statement of Work and are defined as follows:

Section	Explanation	Location
A	The TIC is suspected aldol-condensation product.	COA, Form 1, and EDD
B	Analyte was detected in the associated method blank as well as in the sample.	COA, Form 1, and EDD
C	Pesticide analyte has been confirmed by GC/MS.	COA, Form 1, and EDD
D	Analyte(s) quantified in an analysis performed at a secondary dilution factor.	COA, Form 1, and EDD
E	Identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.	COA, Form 1, and EDD
J	This flag indicates an estimated value concerning either, (1) estimating a concentration for tentatively identified compounds (TICs), or (2) analyte detected at a level less than the RDL or PQL and greater than or equal to the MDL.	COA, Form 1, and EDD
N	Presumptive evidence based upon a mass spectral library search to make a tentative identification of the analyte.	COA, Form 1, and EDD
NJ	Analyte has been tentatively identified and the associated numerical value is estimated based upon 1:1 response factor to the nearest eluting internal standard.	COA, Form 1, and EDD
P	<ul style="list-style-type: none"> - Pesticide/PCB target analyte that is greater than 25% difference for the detected concentrations between the two GC columns. - HPLC target analyte that is greater than 40% difference for the detected concentrations between detectors or columns. 	Form 1 and EDD
ND	Compound analyzed for but not detected (sample quantitation limit has been adjusted to reflect dilutions and percent moisture).	COA, Form 1, and EDD
X	Other reporting flag as defined in report narrative.	COA, Form 1, and EDD
**	Laboratory Control Sample recovery outside of acceptance limit.	QC Summary Report

All surrogate recoveries and acceptance ranges are reported at the bottom of Form 2 or COA.
