NEW YORK DISTRICT, CORPS OF ENGINEERS
JACOB K. JAVITS FEDERAL BUILDING
NEW YORK, N.Y. 10278-0090

January 14, 2003

To Potentially Interested Parties:

The U.S. Army Corps of Engineers is currently conducting a feasibility study for flood protection and environmental restoration for the Upper Passaic River and Tributaries in Long Hill Township, New Jersey. The study is being conducted in partnership with the New Jersey Department of Environmental Protection.

The study was authorized in a resolution of the Committee on Transportation and Infrastructure of the United States House of Representatives, adopted May 7, 1997.

Studies were initiated with the release of a public notice on June 30, 1999. Activities to date have included the preparation of a topographic survey of the study area in Long Hill Township, the modeling of the hydrology and hydraulics of the Upper Passaic River and its tributaries, environmental studies, cultural resources studies, economic analyses of flood damages, geotechnical investigations, and the formulation of plan alternatives to address the flooding in Long Hill Township.

Long Hill Township is hosting an information meeting at 7PM, January 30, 2003 at the Millington School located at 91 Northfield Road, Millington. Representatives from the Army Corps of Engineers and the New Jersey Department of Environmental Protection will be present to provide an overview on the studies conducted to date, describe the potential alternatives for flood protection, and answer questions related to the study.

If have questions related to the study and cannot attend the meeting you may contact Paul A. Tumminello, P.E., Project Manager at 212-264-0437 or paul.tumminello@usace.army.mil
