Mattituck Harbor, NY

**Federal Navigation Channel
Maintenance of Infrastructure and Stewardship**

FACT SHEET

DECEMBER 2008

DESCRIPTION: No work is presently scheduled at Mattituck Harbor.

AUTHORIZATION/PROJECT DESCRIPTION: Mattituck Inlet is located on the Long Island Sound in the town of Southold, NY. The existing federal navigation project provides for a channel, 7 ft deep, from the Long Island Sound to the Village of Mattituck in the Town of Southold, 100 ft wide at the entrance and 80 ft wide thereafter. There are two riprap jetties at the entrance. The east Jetty was completed in 1906 with a length of 775 feet. The west jetty was completed in 1938. The original dredging was completed in 1914.

STATUS: As no funds were appropriated in FY08, the funds provided in FY09 for very basic environmental coordination are not accessible until a FY09 budget is signed by the President. Maintenance dredging was last performed in Fiscal Year 2004. Dredging began on March 17, 2004 as was completed on March 23, 2004. Grain size analysis of the critical shoals revealed that the material is predominantly sand and gravel. Removal of 13, 785 cubic yards of sediment was performed with placement at the adjacent beach east of the east jetty (Bailie's Beach). The public notice was issued on July 30, 2003 and Plans and Specifications were advertised on November 19, 2003. A contract to dredge the inlet was awarded in early January 2004 to Gibson and Cushman Dredging Company, LLC.

Previous maintenance dredging was completed in 1990, which included the removal of approximately 11,000 CY of sediment, with placement at the nearby beach, east of the east jetty. Repairs to the west jetty, including increasing the height of the last 100 ft section by one foot was completed in June 1996.
