HUDSON RIVER
Poughkeepsie, New York
Emergency Streambank Erosion

FACT SHEET

DESCRIPTION: The project area encompasses approximately 1,100 feet of shoreline along the east bank of the Hudson River in the Town and City of Poughkeepsie, New York. The project has stabilized the eroding shoreline and protected the only pumping station providing drinking water for the City and the Town of Poughkeepsie. The project involved around 700 ft of rip-rap and 400 ft of bulkhead. Incidental benefits include creating safe and secure anchorage for two floating docks and preventing silt buildup in the adjacent deepwater habitat of the rare short-nosed sturgeon and other valuable species.

AUTHORIZATION: Section 14 of the 1946 Flood Control Act, as amended (33 U.S.C. 701r).

STATUS: The construction of the project was completed the end of February 2004. The operations and maintenance manual is expected to be completed by the Summer of 2004 with project turnoff occurring in the Fall of 2004.

STUDY COST:

Federal Cost	\$715,000
Non-Federal Cost	\$385,000
	<hr/>
	Total \$ 1,100,000
