US ARMY CORPS OF ENGINEERS
NEW YORK DISTRICT

USACE & SMALL BUSINESS HISTORY

NEW YORK DISTRICT'S ROOTS

In 1776, at George Washington's directive, Rufus Putnam was appointed Chief Engineer in charge of the defenses of New York during the American Revolutionary War. Putnam's first task was to strengthen the incomplete and poorly situated fortifications built around the highlands of upstate West Point, New York. We recognize Putnam as the New York District's first District Engineer.

In 1807, Jonathan Williams, Chief of Engineers and the first Superintendent of the U.S. Military Academy at West Point, was commissioned to build defenses at the entrance of New York Harbor to defend against British attacks. Between 1812 and the start of the Civil War, the Corps built five coastal defense forts in the New York area: Fort Hamilton, Schuyler, Totten, Tompkins and Wadsworth.

WEST POINT

The presence of the Corps at West Point would continue throughout the next century. In 1802, Thomas Jefferson formally established a Corps of Engineers by declaring, "that the said corps, when so organized, shall be stationed at West Point, and shall constitute a military academy." In fact, up until 1866, the West Point Academy Superintendent was also the Chief of Engineers. All members of the Corps in those early years were West Point graduates. The Corps did all the construction at the U.S. Military Academy until 1861, and then from 1941 to present.

CONTRACTING PARTNERSHIPS

In the 1820s, Congress delegated the water resource mission to the Corps, which brought the organization into the civil works arena. One of the most prominent early projects in New York was the Hell Gate navigation project. In the 1850s, an average of 1,000 ships ran aground every year at Hell Gate, a dangerous spot in the East River running from 90th to 100th Street in Manhattan. To fix the problem, the Corps set off huge underwater explosions to demolish many of the rocks, and hired contractors to remove debris by grappling. The second of these blasts, in 1885, was the largest man-made explosion at the time and firmly established the Corps' importance to the civil works mission.
