Re: Discharge Water Report
Silo Water Treatment and Discharge
Closure of Underground Nike Missile Silos
Defense Battery BU-34/35
Town of Aurora, New York

Dear Mr. Rink:

As required by your September 12, 2018 and May 1, 2019 approval letters (see Attachment 1) allowing for the onsite treatment and discharge of water pumped from six former Nike missile silos at the above referenced property, this Discharge Water Report summarizes the treatment and discharge operations performed and presents monitoring data and visual observations. The September 12, 2018 letter approved silo water discharge and treatment activities that were conducted from November 5 through 8, 2018 and from April 17, 2019 through May 8, 2019. The May 1, 2019 letter approved silo water discharge and treatment activities that were conducted from May 9 through June 12, 2019. This letter is organized into the discharges authorized by these two approval letters.

Discharge Authorized by September 12, 2018 Letter

From November 5 through 8, 2018, a total of 154,001 gallons of water was pumped from Silo 3 and treated using the temporary onsite water treatment system. Prior to the November 2018 pumping, Silo 3 was used as a holding tank during excavation dewatering activities for any stormwater that had collected within intact Silos 1, 3 and 4 and for dewatering and stormwater management at the open excavation at Silo 6. This water management scheme varies slightly from the one described in the September 12, 2018 letter. This variance was communicated to you in an October 25, 2018 email to you from Mr. Mark Lovejoy (see Attachment 1). Water pumped from the Silo 6 excavation was pre-treated using bag filters to remove sediment and oily sheens prior to discharging to Silo 3. The discharge flow rate of the treated water was reduced to 100 gpm to minimize the transfer of sediment. Due to the low volume of water generation, one water sample was collected during this four-day period. The water sample was collected and measured in the field for dissolved oxygen (DO), pH and temperature using a YSI 556 multiparameter meter and at SGS Accutest's Dayton, New Jersey laboratory for analysis of total suspended solids (TSS), chemical oxygen demand (COD), oil and grease, iron, aluminum, barium, cadmium, lead and total benzene, toluene, ethylbenzene and xylenes (Total BTEX). Table 1 summarizes the results. Attachment 2 provides copies of the sampling logs prepared for each sampling event and include the results for the parameters measured in the field as well as the flow rate at the time of sampling. Attachment 3 provides copies of the laboratory analytical reports.

As indicated, the aluminum result (0.636 mg/L) exceeded the criteria for discharge specified in your authorization letter (0.3 mg/L). TANTARA notified you in a November 16, 2018 email of this exceedance (see Attachment 1). At the time, it was believed that this result was associated with contamination from aluminum fittings in the discharge hoses. However, as discussed below, it appears most likely that the higher concentration of aluminum observed was due to suspended solids in the water that bound to background aluminum in site soil, and thus, resulted in an increase of aluminum in the discharge. As discussed below, once the flow rate was decreased and smaller size micron bag filters were placed on the system to maximize sediment removal in the weir tank, the aluminum levels in the discharge were reduced.

From April 17 through May 8, 2019, a total of 1,075,000 gallons of water was pumped from the Silos 2, 3 and 5 and treated using the temporary onsite water treatment system as specified in the September 12, 2018 letter. The water from one silo was pumped and treated before moving to the next silo in the following order: Silos 5, 3 and 2. As specified in your September 12, 2018 letter, TANTARA sampled the treated water three separate times per silo: upper 1/3 of the silo, halfway point, and the bottom 1/3 of the silo with the exception of Silo 3 where only two water samples were collected. Water samples were collected and measured in the field for DO, pH and temperature using a YSI 556 multiparameter meter and at SGS Accutest's Dayton, New Jersey laboratory for analysis of TSS, COD, oil and grease, iron, aluminum, barium, cadmium, lead and Total BTEX. Table 1 summarizes the results. Attachment 2 provides copies of the sampling logs prepared for each sampling event and include the results for the parameters measured in the field as well as the flow rate at the time of sampling. Attachment 3 provides copies of the laboratory analytical reports.

Discharge Authorized by May 1, 2019 Letter

From May 9 through June 12, 2019, a total of 1,089,500 gallons of water was pumped from Silos 1, 4, and 6 and treated for sediment removal using a weir tank and bag filters. The water from one silo was pumped and treated before moving to the next silo in the following order: Silos 6, 4 and 1. Two water samples were collected from each silo and measured in the field for DO, pH and temperature using a YSI 556 multiparameter meter and at SGS Accutest's Dayton, New Jersey laboratory for analysis of TSS and COD. Table 1 summarizes the results. Attachment 2 provides copies of the sampling logs prepared for each sampling event and include the results for the parameters measured in the field as well as the flow rate at the time of sampling. Attachment 3 provides copies of the laboratory analytical reports.

The discharge monitoring results indicate that the measured parameter levels met the criteria specified in your September 12, 2018 and May 1, 2019 letters, except for aluminum sampled on November 8, 2018, April 17, 18, 24 and 25, and May 1 and 6, 2019. The aluminum concentrations on those days ranged from 0.475 mg/L to 1.28 mg/L, which exceeded the maximum concentration of 0.3 mg/L. It was determined that these elevated results were due to elevated levels of aluminum present in suspended solids in the effluent. It should be noted that these elevated levels of suspended solids were below the discharge criteria for suspended solids specified in the permit. To reduce the levels of aluminum, smaller size micron bag filters were used, and the pumping flow rate was decreased. As a result, the May 8, 2019 aluminum concentration was below the discharge criteria. TANTARA notified you of the aluminum issue and our efforts to bring the discharge in compliance with the discharge criteria in two emails dated May 8,

2019 and May 16, 2019 (see Attachment 1). In addition, there was one pH exceedance on May 21, 2019. The pH measurement was 9.76, which exceeds the upper level of 9.0.

At least once a day during silo water treatment as required by the September 12, 2018 and May 1, 2019 letters, TANTARA visually inspected the discharge to Cazenovia Creek. Visual inspections included monitoring for the presence of turbidity; suspended, colloidal and settleable solids; oil and floating substances; and fish impairment. Attachment 4 provides photographs of the discharge to Cazenovia Creek.

Upon completion of silo water treatment, the water treatment system was removed from the site. The existing waste profile from the Spring 2018 work was used to dispose of the spent media (granular activated carbon and organoclay). The spent media was disposed of at American Recyclers Company, Tonawanda, NY (Attachment 5).

Please let me know if you would like additional information.

Sincerely,

TANTARA Corporation

Dear Mr. Goepfert:

Silo Water Treatment & Discharge
Scope of Work Plan
Closure of Underground Nike Missile Silo 6
Defense Battery BU 34/35
East Aurora, New York

This letter is pursuant to your letter of September 5, 2018 and the previous submittal of August 27, 2018 from the Tantara Engineering Company and the United Rentals Fluid Solutions Company [URFS Co.], formerly the Baker Corp. The proposed process flow and scope of work outlines the treatment and discharge of missile silo water from Silo 6 to a tributary of Cazenovia Creek along Willardshire Road near Davis Road in the Town of Aurora, Erie County.

There are six (6) Nike Missile Silos at the above location. The ground and surface water in five (5) of the silos was recently pumped out, treated and discharged in a similar fashion to that proposed for Silo 6. The silos are 60' x 60' x 16' deep and each contain approximately 250,000 - 300,000 gals of ground and surface water. The water contained in Silo 6 needs to be removed [and treated] to perform an interior inspection, cleaning and proper decommissioning.

It is our understanding that Silo 6 has been filled with some construction/demolition debris and equipment. The water in this silo is also thought to contain more sediment than the previous silos. The treated flow rate for Silo 6 will be reduced to 100 gpm from 300 gpm and, if needed, a biodegradable polymer will be available to aid in settling and TSS removal. The proposed process flow and scope of work from the URFS Co. [8/24/18] as submitted by Tantara Engineering Corp. on 8/27/18 describes the proposed process to treat the water on site before discharging to a well-defined tributary of Cazenovia Creek in the Town of Aurora. Cazenovia Creek flows to the Town of Orchard Park then on toward the City of Buffalo.

The proposed process flow and scope of work of August 24, 2018 shows the following treatment units to be brought to the silo site. The treatment system will be provided by the United Rentals Fluid Solutions Company [formerly the Barker Corporation].

- One- 4" Hydraulic Submersible Pump with Poser Unit,
- Two-21,000 Gallon Fixed Axle Frac Tanks,
- One-Sound Attenuated Diesel Transfer Pump,
- One-6" 5-Plex Bag Filter Housing,
- Two-3" Duplex Bag Filter Skids,
- Two-KW -2,000 HPV Specialty Media Vessels,
- 4" Lay-flat hose used from Hydraulic Pumps to Frac Tanks and from end of treatment system to discharge point,
- 4" Rigid Hose for rest of treatment system,
- All fittings to be steel or aluminum,
- The Flowmeter to be mechanical propeller style with totalizer,
- Optional semi-passive Bio-Polymer System,
- Constructed hay bale energy dissipation discharge structure.

The discharge shall be approximately 100 gpm from the energy dissipation structure located near the Cazenovia Creek Tributary.

The procedures outlined above, in the Tantara Engineering correspondence of 8/27/18 and the 8/24/18 proposed process flow and scope of work from the URFS Co. regarding treatment and discharge of the ground and surface water contained in missile Silo 6 in the Town of Aurora are acceptable to this office.

Please notify the NYSDEC Division of Water (716/851-7070) 48 hours in advance of discharging.

A Discharge Water Report as discussed in this letter must be submitted to this Office within 30 days of test completion.

The following are the minimum conditions that the U.S.A.C.O.E (Tantara Co./URFS Co.) must meet to release the treated missile silo waters described above.

1. The treated discharge from the silos shall not be directly to any watercourse, but shall be to an upland location sufficiently distant from any stream to prevent the entry of silt and suspended solids.

2. On-site treatment of the silo waters must be provided exactly as described in your previous correspondences. The discharge must occur in such a manner so as to prevent erosion of the bed or banks of the receiving streams. The entry of silt, suspended solids or contaminants is prohibited.

3. The discharge of the silo waters shall be made at a rate and in a manner such that no downstream flooding shall occur. We recommend that the lowest feasible discharge rate occur. This will reduce the likelihood of downstream flooding or erosion. Energy dissipating devices such as that previously provided shall be used.

4. A positive means of controlling and metering the rate of treated silo water discharge and, if necessary, terminating the discharge shall be provided.

5. If deemed necessary at any time, the discharge of the waters shall be terminated upon direction of the Department.

6. The Department's Division of Water shall be notified, by telephone (716/851-7070), of exact date and time at which the discharge of the treated silo waters will begin. This notification shall be made at least 48 hours prior to the commencement of the discharge.

7. The area used for on-site treatment and routing of flows to the creek shall be restored to its original condition. Residuals generated during treatment and discharge must be disposed of in accordance with Department requirements.

8. The water discharged to the streams shall be monitored as follows. To prevent water quality problems, the settled and filtered silo waters shall be at or below the following concentrations. Exceeding these levels could result in legal action by this office.

Parameter	Sample Type & Frequency	Max Concentrations
Flow (gpm)	Monitor and Report	N.A.
Duration (hours)	Monitor and Report	N.A.
Suspended Solids	Grab, 3 per tank*	60 mg/l
Chemical Oxygen Demand	Grab, 3 per tank*	N.A.
Oil and Grease	Grab, 3 per tank*	15 mg/l
Iron	Grab, 3 per tank*	3 mg/l
Aluminum	Grab, 3 per tank*	0.3 mg/l
Arsenic	Grab, 3 per tank*	0.15 mg/l
Barium	Grab, 3 per tank*	3.0 mg/l
Cadmium	Grab, 3 per tank*	0.015 mg/l
Lead	Grab, 3 per tank*	0.15 mg/l
BTX (total)	Grab, 3 per tank*	0.1 mg/l
Dissolved Oxygen	Grab, 3 per tank*	Minimum of 5.0 mg/l
pH	Grab, 3 per tank*	6.0 – 9.0
Temperature	Grab, 3 per tank*	N.A.

*The first grab shall be taken through the upper 1/3 of each silo. The second grab shall be taken at approximately the ½ point in the silo. The third grab shall be taken through the bottom 1/3 of each silo.

9. Pumping from the silos shall not begin from the bottom of the tanks in the event that there are solids at the tank bottom. Rather, it is recommended that the pump be set at 1/3, then 2/3's, the depth from the surface. During dewatering of the bottom third of each tank, the pump should be lowered periodically from the 2/3's level to determine if there are solids at the bottom.

If so, the water should be pumped and treated only to that interface. If the solids are in a slurry or sludge form, this material cannot be pumped and treated, but must be trucked off site and disposed of per Department requirements.

10. Periodically during the duration of the water discharge, the receiving water body shall be visually monitored (and reported) for turbidity; suspended, colloidal and settleable solids; oil and floating substances; and fish impairment. Should any of the preceding parameters be greater than ambient, the discharge shall be terminated and this Department's Division of Water notified.

11. The discharge of the treated silo waters shall occur only during daylight hours.

12. A report summarizing the treatment and discharge operations, including a compilation of all monitoring data and visual observations, shall be submitted to this Department's Division of Water within thirty (30) days after completion of discharge.

13. All owners of property to which treated silo waters will be discharged shall be notified prior to the start of the discharge.

14. Please have a copy of this letter, the September 5, 2018 letter from the Department of the Army, the August 27, 2018 correspondence from the Tantara Corp, along with the process flow and scope of work plan from the URFS Company [8/24/18] available at the dewatering site.

If you have any questions regarding this letter, please call me at 716/851-7070.

Sincerely,

Richard A. Rink

Richard,

We expect to begin treatment of the water covered by your approval letter dated 9/12/18.

We have made a change on how we have managed the water we've collected as a result of dewatering during excavating soil from Silo 6. We have temporarily staged water pumped from Silo 6 in to a clean and empty Silo 3 (the silo immediately to the north of Silo 6). We've have also pumped rain water that had collected in the other cleaned silos into Silo 3. It is the water currently contained within Silo 3 that we wish to treat and discharge as outlined in your approval letter. The total volume of water to be treated is now about 200,000 gals. No change to the treatment and discharge system is proposed.

United Rentals (formerly Baker Corps) is scheduled to mobilize their system to the site on Monday and Tuesday.

Please let me know if you have an questions on this and when you plan to visit us at the site so that I can alert the property owner. I will keep you informed if this schedule should change.

Thank you,
Mark

Mr. Rink,

Attached are the results of the one sample we collected from the discharge from the treatment system. Unfortunately, the aluminum result (0.636 mg/L) exceeded the criteria specified in your approval letter (0.3 mg/L). I'm certain this is from the treatment system's aluminum fittings because we almost had an exceedance from the first few samples we collected the first time we did the sampling for the previous treatment system (see the attached table and note the Al results for Silo 2).

We terminated water treatment and discharge a week ago on 11/8/18 due to the drop in temperature and removed the treatment system from the site earlier this week. We were able to pump and treat 154,001.40 gallons of water before terminating the system. We would like to return the system to the site in April when we return to complete the silo closure activities and use the system to finish treating the remaining water contained within Silos 2 and 3. Prior to starting the system, we will sample the water in these silos for aluminum to confirm our theory the source is the treatment system.

Dear Mr. Goepfert:

Silo Water Management Plan 2019
Closure of Underground Nike Missile Silos
Defense Battery BV-34/35
Town of Aurora, New York

This letter is pursuant to the April 11, 2019 and March 14, 2019 letters from Mark Lovejoy, P.E. of the Tantara Corporation regarding continuing the dewatering of the missile silo's at the Town of Aurora Site, Erie County.

The proposals outline two (2) courses of action. One for the three missile Silos (1, 4, 6) that have been already dewatered, cleaned out and pressure washed but have refilled with ground and surface water over the winter. The other proposal is for the three Silos (2,3,5) that have not had all the equipment removed and need to be dewatered, cleaned out and pressure washed before complete demolition and backfilling can take place. Each Silo contains roughly 250,000 gallons of water that will require on-site treatment before discharging to a well-defined tributary of Cazenovia Creek in the Town of Aurora.

The proposal for dewatering and treating the water in Silos 1, 4,6 is satisfactory and consists of pumping at a flow rate not to exceed 200 gpm to a 18,000 gallon weir tank for settling solids. From the weir tank the water will be pumped through a series of bag filters for further reducing solids and then discharged into an onsite straw bale/geotextile energy dissipation structure. Two (2) effluent grab samples will be required from each tank, at 1/3 and 2/3 the tank volume. The following parameters shall be tested and reported for each tank: Flow (gpm); Duration (hours); TSS (mg/l); COD (mg/l); D.O. (mg/l); pH and temperature.

Periodically during the duration of the discharge, the receiving waterbody shall be visually monitored (and reported) for turbidity, suspended, colloidal and settleable solids. Should any of the preceding parameters be greater than ambient, the discharge shall be terminated and this Department's Division of Water notified. Discharge shall only be during daylight hours.

The proposal for dewatering and treating the water in Silos 2,3,5 is the same as that outlined in the submittals for this project on September 5, 2018 and August 27, 2018 from the Tantara Engineering Company and the United Rentals Fluid Solution (URFS) Company. The proposal for dewatering, treatment, discharge and sampling was and is acceptable to this office and is covered in detail in our September 12, 2018 response letter (enclosed). All criteria and conditions of this letter remain in effect for dewatering Silos 2,3 and 5.

A report summarizing the treatment and discharge operations, including a compilation of all monitoring data and visual observations for Silos 1,4,6 and Silos 2,3,5 shall be submitted to the Department's Division of Water within (30) days after completion of all dewatering operations.

Please have a copy of this letter, the September 12, 2018 letter from this office and the process flow and scope of work plan from the URFS Company (August 27, 2018) available at the dewatering site.

If you have any questions regarding this letter, please call our office at (716) 851-7070.

Very truly yours,

Richard A Rink

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Mr. Rink,

Here are the results from the last Silo 5 sample and the first Silo 3 sample. As you can see, the Al concentration continues to exceed the discharge criteria. The TSS values are also still elevated (but below discharge criteria) supporting the assumption that the Al is associated with the suspended solids. These samples were collected after installing the 1-micron bag filters. I've discussed this with Rain for Rent and the next course of action is to reduce the flow to below 100 gpm. The thinking is that the higher flow rate is exceeding their design capacity and pushing more sediment through the filters than intended. I know you also suggested this as a possible solution during our previous conversation. We are now running the system below 100 gpm and will be collecting a sample sometime today to see if this has an effect.

We expect to complete dewatering Silos 2, 3 and 5 today or tomorrow. On Monday, we will clean out the media vessels and Rain for Rent will remove those components of the treatment system at some point thereafter. From this point on, we will only need the weir tank and bag filters for dewatering Silos 1, 4 and 6. Water from these silos will be pumped, treated, and discharged pursuant to the requirements in your May 1, 2019 letter. We expect to continue using a pumping rate of less than 100 gpm.

If you have any questions or would like additional information, please do not hesitate to contact me.

Thank you,

Mr. Rink,

Attached are the results of the recent sampling of discharge from the treated water pumped from the Silo 2. This sample was collected after throttling the flow rate down to 100 gpm. As you can see, this seems to have been effective in reducing the concentration of TSS and aluminum to below the discharge standard. Given these results, we will continue to pump water from the silos at a maximum flow rate of 100 gpm.

If you have any questions or would like additional information, please do not hesitate to contact me.

Re: SGS North America – Dayton, NJ Jobs # JC77588 – Reissues

Dear Mr. Lovejoy,

The final reports for SGS jobs number JC77588 has been edited to reflect corrections to the results. These edits have been incorporated into the revised report which is attached.

Specifically, the sample's ID has been revised to "SILO6-1" to reflect matching chain of custody. Arsenic and Barium have been retrieved for sample JC77588-1A per Ms. Jennifer Parshall's request on 5/30/219. The attached revised report incorporates these revisions.

SGS apologizes for this occurrence and for any inconvenience this situation may have caused. Please contact me if I can be of further assistance in this matter.

Sincerely,

Report Department

SGS North America Inc.

TSS SAMPLE DESCRIPTION SHEET

F. Lot# 111301

SGS Sample ID	Appearance (clarity, color, etc.)	Filter size used	Non-standard volumes. Comment with reason as shown below.	Limited Volume
JC77582-2	Clear	42	550	✓ QC1
JC77469-1	11		550	✓ QC2
JC77582-1	Clear		1000	
JC77469-2	Clear		1000	
JC77469-3	Pale		1000

JC77465-1	Cloudy Pale yellow		300a	
JC77540-2	foamy cloudy Pale yellow		500a	
JC77542-1	Cloudy & Pale		1000	
JC77480-1	Slight thick dark Brown		10ma	
JC77479-2	grey & Black Particles		130a	
JC77588-1	Cloudy Pale		1000	
JC77488-1	Pale & Particles		1000	
JC77488-2	Dark yellow		1000	
JC77488-3	dark Brownish yellow		60a	
JC77488-5	Slight thick Marron Particles		20ma	
JC77488-6	With Black Particles	↓	1000	

Reason (a). Sample contains heavy particulates and it can be assessed by appearance that it will clog the filter at higher volumes.
Reason (b). Initial analysis of the sample at a higher volume produced clogging. Rerunning at reduced volume.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Tantara Corporation	**Job No**	JC86676
Site:	USACE Buffalo Nike Missle UST, East Aurora, NY	**Report Date**	4/25/2019 9:52:25 AM

On 04/19/2019, 2 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.3 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC86676 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method SW846 8260C

Matrix: AQ **Batch ID:** V4B3809

- All samples were analyzed within the recommended method holding time.
- Sample(s) JC86676-1MS, JC86676-2DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals Analysis By Method SW846 6020B

Matrix: AQ **Batch ID:** MP14424

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC86645-3MS, JC86645-3MSD, JC86645-3SDL were used as the QC samples for metals.

General Chemistry By Method EPA 1664A

Matrix: AQ **Batch ID:** GP20823

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC86676-1DUP, JC86828-1MS were used as the QC samples for HEM Oil and Grease.

General Chemistry By Method SM2540 D-11

Matrix: AQ **Batch ID:** GN94378

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC86676-1DUP were used as the QC samples for Solids, Total Suspended.

General Chemistry By Method SM5220 C-11,HACH8000

Matrix: AQ **Batch ID:** GP20799

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC86398-1DUP, JC86398-1MS were used as the QC samples for Chemical Oxygen Demand.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover

Lot# P2731499

Reason (a). Sample contains heavy particulates and it can be assessed by appearance that it will clog the filter at higher volumes.
Reason (b). Initial analysis of the sample at a higher volume produced clogging. Rerunning at reduced volume.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Tantara Corporation **Job No** JC87121

Site: USACE Buffalo Nike Missle UST, East Aurora, NY **Report Date** 5/6/2019 4:32:08 PM

On 04/27/2019, 2 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 1.1 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of JC87121 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

MS Volatiles By Method SW846 8260C

Matrix: AQ **Batch ID:** VL9051

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87067-2MS, JC87121-2DUP were used as the QC samples indicated.

Metals Analysis By Method SW846 6020B

Matrix: AQ **Batch ID:** MP14645

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87142-4MS, JC87142-4MSD, JC87142-4SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Arsenic, Cadmium, Lead are outside control limits. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP14645-SD1 for Lead: Serial dilution indicates possible matrix interference.

General Chemistry By Method EPA 1664A

Matrix: AQ **Batch ID:** GP21011

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87121-1MS, JC87121-2DUP were used as the QC samples for HEM Oil and Grease.

General Chemistry By Method SM2540 D-11

Matrix: AQ **Batch ID:** GN94637

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87023-1DUP were used as the QC samples for Solids, Total Suspended.

Matrix: AQ **Batch ID:** GN94725

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87116-1DUP were used as the QC samples for Solids, Total Suspended.

General Chemistry By Method SM5220 C-11,HACH8000

Matrix: AQ **Batch ID:** GP20988

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC87121-1DUP, JC87121-1MS were used as the QC samples for Chemical Oxygen Demand.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS North America Inc indicated via signature on the report cover
