

PUBLIC NOTICE

US Army Corps of Engineers New York District Jacob K. Javits Federal Building New York, N.Y. 10278-0090 ATTN: Regulatory Branch

In replying refer to:

Public Notice Number: NAN-2016-00994-EYR

Issue Date: **December 1, 2016**Expiration Date: **December 31, 2016**

The New York District, Corps of Engineers has received an application for a Department of the Army permit pursuant to Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403) and Section 404 of the Clean Water Act (33 U.S.C. 1344):

APPLICANT:

Town of North Hempstead

285 Denton Avenue

New Hyde Park, NY 11040

ACTIVITY:

10-year maintenance dredging with upland beach placement.

WATERWAY:

Manhasset Bay, Long Island Sound

LOCATION:

Dredge Location: Entrance channel into Manhasset Bay from boat ramp at

Manorhaven Town Park.

Dredge Material Placement Locations: Manorhaven Town Park Beach upland of the Plane of Spring High Water, Village of Manorhaven, Town of North

Hempstead, Nassau County, NY

A detailed description and plans of the applicant's activity are enclosed to assist in your review.

The decision whether to issue a permit will be based on an evaluation of the probable impact including cumulative impacts of the proposed activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. All factors which may be relevant to the proposal will be considered including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property ownership and, in general, the needs and welfare of the people.

The Corps of Engineers is soliciting comments from the public; Federal, state, and local agencies and officials; Indian Tribes; and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the Corps of Engineers to determine whether to issue, modify, condition or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and the other public interest factors listed above. Comments are used in preparation of an Environmental Assessment and/or an

Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

ALL COMMENTS REGARDING THE PERMIT APPLICATION MUST BE PREPARED IN WRITING AND MAILED TO REACH THIS OFFICE BEFORE THE EXPIRATION DATE OF THIS NOTICE, otherwise, it will be presumed that there are no objections to the activity.

Comments submitted in response to this notice will be fully considered during the public interest review for this permit application. All written comments, including names and addresses, will be made a part of the administrative record, available to the public under the Freedom of Information Act. The Administrative Record, or portions thereof, may also be posted on a Corps of Engineers internet web site. Due to resource limitations, this office will normally not acknowledge the receipt of comments or respond to individual letters of comment.

Any person may request, in writing, before this public notice expires, that a public hearing be held to collect information necessary to consider this application. Requests for public hearings shall state, with particularity, the reasons why a public hearing should be held. It should be noted that information submitted by mail is considered just as carefully in the permit decision process and bears the same weight as that furnished at a public hearing.

Our preliminary determination is that the activity for which authorization is sought herein is not likely to affect any Federally-endangered or threatened species or their critical habitat. However, pursuant to Section 7 of the Endangered Species Act (16 U.S.C. 1531), the District Engineer is consulting with the appropriate Federal agency to determine the presence of and potential impacts to listed species in the project area or their critical habitat.

The Magnuson-Stevens Fishery Conservation and Management Act, as amended by the Sustainable Fisheries Act (Public Law 104-267), requires all Federal agencies to consult with the National Oceanic and Atmospheric Administration Fisheries Service (NOAA/FS) on all actions, or proposed actions, permitted, funded, or undertaken by the agency, that may adversely affect Essential Fish Habitat (EFH). The proposed construction work, fully described in the enclosed Work Description, could cause minimum disruption of habitat for various life stages of some EFH-designated species as a result of a minor short-term temporary increase in turbidity during construction. However, the New York District has made the preliminary determination that the site-specific minor adverse effects are not likely to be substantial because it is expected that fish populations would avoid the small area of minor disturbance. Further consultation with NOAA/FS regarding EFH impacts and conservation recommendations is being conducted and will be concluded prior to the final decision on this permit application.

Based upon a review of the latest published version of the National Register of Historic Places, there are no known sites eligible for, or included in, the Register within the permit area. Presently unknown archeological, scientific, prehistorical, or historical data may be lost by work accomplished under the required permit.

Review of activities pursuant to Section 404 of the Clean Water Act will include application of the guidelines promulgated by the Administrator, U.S. Environmental Protection Agency, under authority of Section 404 (b) of the Clean Water Act and the permit applicant will obtain a water quality certificate or waiver from the appropriate state agency in accordance with Section 401 of the Clean Water Act prior to a permit application decision.

CENAN-OP-RE
Public Notice NAN-2016-00994-EYR

Pursuant to Section 307 (c) of the Coastal Zone Management Act of 1972 as amended [16 U.S.C. 1456 (c)], for activities under consideration that are located within the coastal zone of a state which has a federally approved coastal zone management program, the applicant has certified in the permit application that the activity complies with, and will be conducted in a manner that is consistent with, the approved state coastal zone management program. By this public notice, we are requesting the state's concurrence with, objection to, or waiver of the applicant's certification.

No permit decision will be made until one of these actions occurs. For activities within the coastal zone of New York, the applicant's certification and accompanying information is available from the New York State Department of State Division of Coastal Resources, Coastal Management Program, 99 Washington Avenue — Suite 1010, Albany, New York 12231-0001, Telephone (518) 474-6000. Comments regarding the applicant's certification, and copies of any letters to this office commenting upon this proposal, should be so addressed.

In addition to any required water quality certificate and coastal zone management program concurrence, the applicant has obtained or requested the following governmental authorization for the activity under consideration:

New York State Department of Environmental Conservation

It is requested that you communicate the foregoing information concerning the activity to any persons known by you to be interested and who did not receive a copy of this notice.

If you have any questions concerning this application, you may contact this office at (917) 790-8715 and ask for Mr. Robert Youhas.

In order for us to better serve you, please complete our Customer Service Survey located at http://www.nan.usace.army.mil/Missions/Regulatory/CustomerSurvey.aspx. For more information on New York District Corps of Engineers programs, visit our website at http://www.nan.usace.army.mil.

WORK DESCRIPTION

The applicant, Town of North Hempstead, has requested Department of the Army authorization to perform dredging with ten-year maintenance with placement of the dredged material at a designated upland beach placement area. The project's proposed dredge area encompasses an existing boat ramp at Manorhaven Town Park and its entrance channel into Manhasset Bay. The project's proposed dredged material placement area is at the Manorhaven Town Park beach, upland of the Plane of Spring High Water. Both the dredge area and the beach placement area are located within the Village of Manorhaven, Town of North Hempstead, Nassau County, New York.

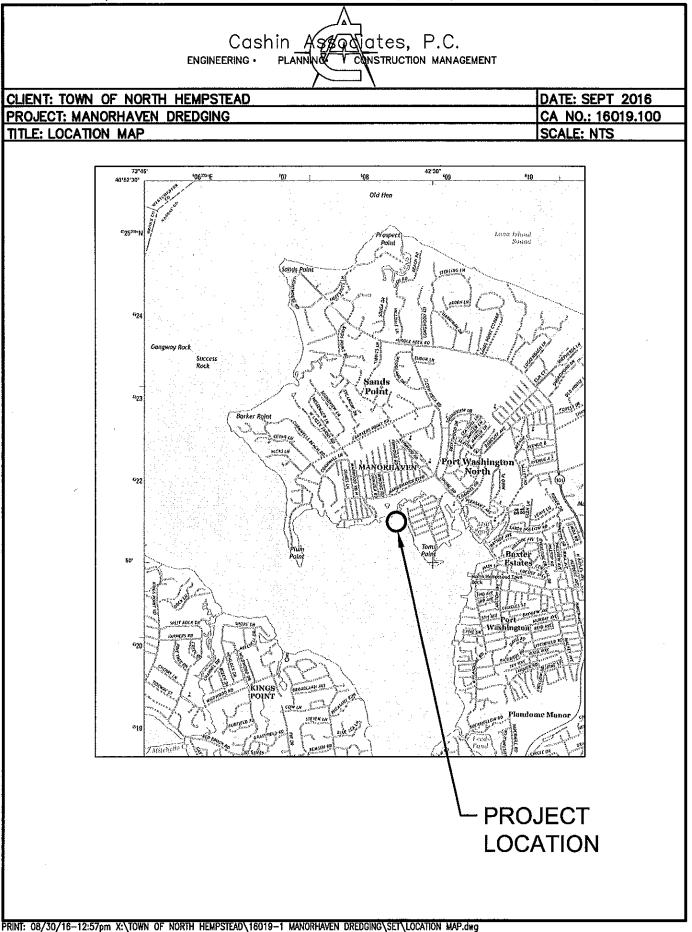

The proposed dredge area is L-shaped, approximately 8,000-square feet, and extends to a maximum depth of -6-feet below the Plane of Mean Low Water (MLW). The estimated total dredge volume of 14,000-cubic yards will be placed upland of the Plane of Spring High Water at Manorhaven Town Park beach. Return flow to the waterway is proposed. All of the work would be accomplished by hydraulic cutterhead dredge, with the dredged material transported via pipeline to the beach placement area. The dredge pipeline would be floating, except at channel crossings where it would be submerged to accommodate vessels transiting within Manhasset Bay.

The permit applicant has stated that, based on impending results of New York State Department of Environmental Conservation-required sediment sampling, that any dredged material deemed unsuitable for upland beach placement will be dredged via clamshell dredge, placed on barges, and transported to the mainland for upland disposal. Barge overflow is proposed.

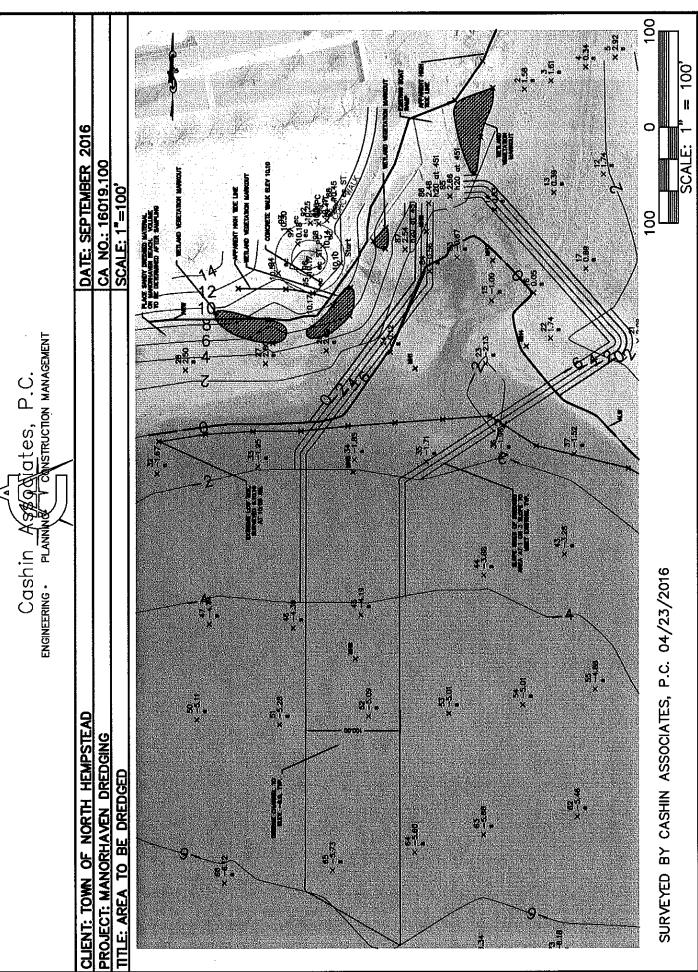

The applicant plans to conduct two additional dredging events within the ten-year maintenance period and have stated that they have avoided, minimized, and mitigated for potential impacts proposed to the maximum extent practicable by limiting the dredging area to the minimum area required for safe and reasonable navigation between the Manorhaven Town Park boat ramp and entrance channel into Manhasset Bay. Any potential impacts would be temporary and would be offset by implementation of in-water work windows and best management practices associated with the proposed use of a hydraulic dredge and floating pipeline. The use of a hydraulic dredge and floating pipeline would provide the cleanest and least obtrusive method for sediment removal and transport, minimizing to the greatest extent possible any potential adverse effects to the aquatic environment. Utilization of a clamshell dredge, if determined by sediment sampling results to be necessary to remove bottom sediments unsuitable for upland beach placement, is anticipated to be short-in-duration and low in dredge volume.

The stated purpose of this project is to maintain the entrance channel to Manhasset Bay at Manorhaven Town Park to provide safe navigation for recreational marine vessels, as well as to provide sand nourishment for the Manorhaven Town Park shoreline for erosion and flood protection.
